

BUSINESS PERFORMANCE REPORT

Data Analytics & Business Intelligence — Task 2
Maincrafts Technology Internship

1. KPI Overview

The following key performance indicators summarize the overall business performance across all regions, categories, and customer segments based on the Sample Superstore dataset.

TOTAL SALES	TOTAL PROFIT	PROFIT MARGIN	TOTAL CUSTOMERS
\$2.29M	\$286K	12.5%	793

Key Highlights:

- Total revenue of \$2.29M generated across 4 regions over the analysis period.
- Overall profit margin of 12.5% indicates a moderately profitable business.
- 793 unique customers contributed to the total revenue.
- November recorded the highest monthly sales, confirming a strong Q4 seasonal trend.

2. Regional Performance

Sales were analyzed across four regions — West, East, Central, and South — to identify top-performing markets and areas requiring strategic attention.

Region	Total Sales	Rank	Status
West	\$2,104,439	#1	Highest Revenue
East	\$2,075,886	#2	Strong Performance
Central	\$1,953,380	#3	Moderate Growth
South	\$1,621,274	#4	Lowest Revenue

Key Findings

- West region leads with \$2.10M in total sales, contributing approximately 26.8% of total revenue.
- East region follows closely at \$2.07M, showing strong and consistent performance.
- South region lags significantly at \$1.62M, presenting an opportunity for targeted growth strategies.

- Central region shows moderate performance at \$1.95M with room for improvement.

Recommendation

Focus marketing efforts and promotional campaigns in the South region to close the performance gap. Replicate the strategies that have driven success in the West and East regions.

3. Category Performance

Three product categories were analyzed — Technology, Office Supplies, and Furniture — to assess profitability and identify the most valuable product lines.

Category	Profit Margin	Total Profit
Technology	17.40%	\$145,455
Office Supplies	17.04%	\$122,491
Furniture	2.49%	\$18,451

Key Findings

- Technology is the most profitable category with a 17.40% profit margin and \$145,455 in total profit.
- Office Supplies closely follows with a 17.04% margin, making it equally efficient despite lower price points.
- Furniture is critically underperforming with only a 2.49% profit margin — barely breaking even.
- Discounts applied to Furniture orders are likely a major driver of reduced profitability.

Recommendation

Reduce or eliminate high discounts on Furniture products. Consider renegotiating supplier costs or repositioning Furniture as a premium product line to improve margins. Double down on Technology sales as it drives the most profit per dollar of revenue.

4. Customer Analysis

Customer-level analysis was performed using SQL JOIN operations combining the Orders and Customers tables to identify top revenue contributors and segment performance.

Top 5 Customers by Revenue

Customer Name	Total Revenue
Sean Miller	\$100,172
Tamara Chand	\$76,209
Raymond Buch	\$60,469
Adrian Barton	\$57,894
Sanjit Chand	\$56,569

Segment Analysis

- Consumer segment is the largest, generating \$1,161,401 — approximately 50.5% of total sales.
- Corporate segment contributes \$706,146 — about 30.7% of total sales.
- Home Office is the smallest segment at \$429,653 — roughly 18.7% of revenue.

Recommendation

Develop a dedicated loyalty program for top customers like Sean Miller and Tamara Chand to retain high-value clients. Consider targeted B2B campaigns to grow the Corporate segment, as it has strong revenue potential with fewer customers.

5. Seasonal Sales Trend

Monthly sales analysis revealed a clear seasonal pattern across the dataset.

- Sales are consistently lowest in January (\$94,925) and February (\$59,751).
- A significant spike occurs in March (\$205,005), likely driven by Q1 budget releases.
- Sales remain relatively stable from April to August (\$137K–\$159K per month).
- A strong surge begins in September (\$307,650) and peaks in November (\$352,461).
- December shows a slight dip (\$325,294) but remains among the top months.

Recommendation

Plan major product launches and marketing campaigns around September–November to capitalize on peak sales periods. Introduce promotional offers in January and February to stimulate demand during the slowest months.

6. Recommendations for Business Growth

- Invest in the South region through targeted marketing and regional promotions to close the \$500K revenue gap with the West.
- Reduce discounting in the Furniture category — current margins at 2.49% are unsustainable. Review pricing strategy.
- Scale Technology sales efforts as it delivers the highest profit margin at 17.40%.
- Build a customer retention program for top 10 customers who collectively drive significant revenue.
- Plan seasonal inventory and campaigns around the November sales peak for maximum impact.
- Expand the Corporate segment with tailored B2B offerings, as it shows strong revenue contribution with room to grow.
